

Seat **FRANCOFORTE**

The FRANCOFORTE model is a one-piece seat with smooth lines, internally reinforced with transverse and longitudinal ribs to ensure quality and durability. The backrest features a closed double-wall box design, providing maximum resistance to vandalism while offering optimal comfort during sporting events.

Certified to the highest market standards, the seat complies with FIFA/UEFA recommendations and the Minimum Environmental Criteria (CAM), in accordance with European Standards EN 13200-1-4. It has been laboratory tested to meet EN 12727:2017 (level 4 – severe).

The FRANCOFORTE monoblock is made from top-quality injection-molded polypropylene copolymer. On request, it is also available in a green version made from recycled polypropylene (PSV), certified by IPPR, or in polyamide.

The seat is fire-retardant according to current regulations and UV-resistant thanks to specific additives. It features a tamper-proof, customizable numbered tag.

Its smooth surface allows for easy cleaning, while liquid drainage is ensured through a central hole integrated into the seat. Installation is done using 2, 3, or 5 anchoring points, protected by non-removable caps in the same color as the seat.
