

Seat MILANO

The MILANO model is a monoblock seat featuring numerous transverse and longitudinal reinforcement ribs, ensuring its quality and robustness. Designed ergonomically, it provides maximum comfort during sporting events and efficient liquid drainage. The structure is free of holes to prevent dirt accumulation, and it offers a double-walled, closed box-shaped backrest, specifically designed to guarantee maximum resistance to vandalism.

The MILANO seat meets the highest market standards, complying with FIFA/UEFA recommendations and Minimum Environmental Criteria (CAM). It's made from high-quality copolymer polypropylene via injection molding and is also available upon request in recycled polypropylene (PSV), certified by IPPR, or in polyamide.

The seat is flame-retardant according to current regulations and UV-resistant thanks to specific additives. It features a non-removable, always visible numbered tag with customized numbering as per client requests. Its smooth and uniform surface facilitates cleaning operations. Installation is secured via two closed anchoring points, protected by non-removable caps that match the seat's color.
