

Seat PESARO

The PESARO tip-up seat is a high-back seat with a seat pan that automatically and vertically folds up by gravity.

It's manufactured from injection-molded copolymer polypropylene using blow molding technology and virgin material. Upon request, it's also available in green "second life" polypropylene, derived from segregated and/or industrial waste (PSV), certified by IPPR (Institute for the Promotion of Recycled Plastics).

The PESARO seat complies with FIFA/UEFA regulations and European standards EN 13200-1-4. It's tested according to EN 12727:2017 (level 4 – severe) and is flame-retardant per current regulations, with UV resistance thanks to specific additives.

The seat includes a non-removable, numbered tag with custom numbering available upon client request. The seat support is made of pressed steel sheet, with a color chosen by the client, and features a side tag for row identification.

The PESARO model is also available in an upholstered version with fabric or eco-leather, featuring flame-retardant polyurethane padding.
