

## Seat STANDARD

The STANDARD model is a high-back monoblock seat, designed to withstand even intense use. It features transverse and longitudinal reinforcement ribs with a thickness of 2.5/3 mm, further strengthened at the fixing points. Its 6 mm perimeter edge ensures maximum resistance to vandalism. Installation across the entire step/tier prevents dirt accumulation. The ergonomic design provides high comfort, while liquid drainage occurs through an integrated hole.

Certified according to the highest market standards, the STANDARD seat complies with FIFA/UEFA recommendations and Minimum Environmental Criteria (CAM), adhering to European Standards EN 13200-1-4. It's laboratory-tested according to European Standard EN 12727:2017 (level 4 – severe).

The monocoque is made from high-quality copolymer polypropylene via injection molding. "Green" versions in recycled polypropylene (PSV), certified by IPPR, or in polyamide are available upon request.

Flame-retardant and UV-resistant thanks to specific additives, the seat comes with a non-removable numbered tag, customizable upon request. Its smooth surface makes cleaning easy.

The STANDARD model offers various depth options (30 mm, 35 mm, 40 mm) to adapt to different tiers, and is available with various fixing configurations:

- STANDARD 30 features four fixing points.
- STANDARD 40 features four fixing points.

STANDARD 35 con 2, 3 o 4 punti di fissaggio;
